

Práctica 5. Reglas de asociación

Dataset: Store_data

```
In [1]: import numpy as np
import matplotlib.pyplot as plt
import pandas as pd
from apyori import apriori
```

```
In [2]: tienda = pd.read_csv('store_data.csv', header=None)
tienda.head(3)
```

Out[2]:

| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | |
|---|---------|-----------|---------|----------------|--------------|------------------|------|----------------|--------------|--------------|----------------|-----------|-------|-------|---------------|--------|--------|
| 0 | shrimp | almonds | avocado | vegetables mix | green grapes | whole weat flour | yams | cottage cheese | energy drink | tomato juice | low fat yogurt | green tea | honey | salad | mineral water | salmon | antiox |
| 1 | burgers | meatballs | eggs | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | |
| 2 | chutney | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | NaN | |

Utilizando APRIORI

```
In [3]: listas = []
for i in range(len(tienda)):
    #if tienda.values[i,j]!="NaN":
    #for j in range(len(tienda.columns)):
    listas.append([str(tienda.values[i,j]) for j in range(len(tienda.columns)) if str(tienda.values[i,j]) != "nan"])
```

```
In [4]: reglasAsociacion = apriori(listas, min_support=0.0053, min_confidence=0.2, min_lift=3, min_length=2,max_length=3)
resultadosAsociacion = list(reglasAsociacion)
print(len(resultadosAsociacion))

16
```

```
In [5]: data=[]
columns=["Rule","Support","Confidence","Lift"]
consolidado=pd.DataFrame()
for item in resultadosAsociacion:
    par = item[0]
    items = [x for x in par]
    if len(items)==3:
        Rule= items[0] + " , " + items[1]+ " -> " + items[2]
    else:
        Rule= items[0] + " -> " + items[1]
    data.append({"Rule":Rule,"Support":item[1],"Confidence":item[2][0][2],"Lift":item[2][0][3]})
consolidado=pd.DataFrame(data,columns=columns)
consolidado.sort_values(by="Lift", ascending=False).head(10)
```

Out[5]:

| | Rule | Support | Confidence | Lift |
|----|--|----------|------------|----------|
| 1 | escalope -> pasta | 0.005866 | 0.372881 | 4.700812 |
| 4 | whole wheat pasta -> olive oil | 0.007999 | 0.271493 | 4.122410 |
| 13 | spaghetti , herb & pepper -> ground beef | 0.006399 | 0.393443 | 4.004360 |
| 12 | mineral water , herb & pepper -> ground beef | 0.006666 | 0.390625 | 3.975683 |
| 3 | tomato sauce -> ground beef | 0.005333 | 0.377358 | 3.840659 |
| 0 | escalope -> mushroom cream sauce | 0.005733 | 0.300699 | 3.790833 |
| 10 | spaghetti , tomatoes -> frozen vegetables | 0.006666 | 0.239234 | 3.498046 |
| 2 | herb & pepper -> ground beef | 0.015998 | 0.323450 | 3.291994 |
| 11 | grated cheese , spaghetti -> ground beef | 0.005333 | 0.322581 | 3.283144 |
| 5 | shrimp , chocolate -> frozen vegetables | 0.005333 | 0.232558 | 3.254512 |

Interpretación

Interpretación

Considerando los parámetros de la función apriori, se evidencia que los productos con mayor asociación son:

Pasta y Escalope, Whole wheat pasta y Olive Oil, y Ground beef, herb&pepper y spaghetti

Destacar que se ha modificado el código para eliminar los datos NaN

Vamos a comparar estos mismos resultados con la técnica MLxtend

Utilizando MLXTEND

```
In [6]: from mlxtend.frequent_patterns import apriori
        from mlxtend.frequent_patterns import association_rules
```

```
In [7]: tienda1 = tienda.stack()
        tienda1 = tienda1.reset_index()
        del tienda1["level_1"]
        tienda1.rename(columns={0:'items'}, inplace=True)
        tienda1.rename(columns={'level_0':'nro'}, inplace=True)
        tienda1.head(3)
```

Out[7]:

| | nro | items |
|---|-----|---------|
| 0 | 0 | shrimp |
| 1 | 0 | almonds |
| 2 | 0 | avocado |

```
In [8]: tienda1 = tienda1.groupby(['nro', 'items']).size()
        aux = tienda1.unstack(level=-1)
        productos = aux.reset_index().fillna(0).set_index('nro')
        #productosTienda = lambda x: 0 if == 0 else 1
        def codificar(x):
            if x <= 0:
                return 0
            if x >= 1:
                return 1
        productosTienda = productos.applymap(codificar)
        productosTienda.head(3)
```

Out[8]:

| | items | asparagus | almonds | antioxydant juice | asparagus | avocado | babies food | bacon | barbecue sauce | black tea | blueberries | ... | turkey | vegetables mix | water spray |
|-----|-------|-----------|---------|----------------------|-----------|---------|----------------|-------|-------------------|--------------|-------------|-----|--------|-------------------|----------------|
